

CI 1X4-D1C3 CC-Link/LT Remote I/O Module

Please read this manual thoroughly before starting to use the product and handle the product properly

User's Manual

MODEL CL1X4-D1C3 MANI IAI Number 1Y997D10601E CC-link/17 Data September 2008

OSAFETY PRECAUTIONS (Read these precautions before using)

Please read this manual carefully and pay special attention to safely in order to handle this product properly. Also pay careful attention to safely and handle the module properly.

These precautions apply only to Mitsubishi equipment. Refer to the user's manual of the CPU module to use for a description of the PLC system safety nrecautions

These SAFETY PRECAUTIONS classify the safety precautions into two categories: "DANGER" and "CAUTION".

Procedures which may lead to a dangerous condition DANGER and cause death or serious injury if not carried out nronerly

Procedures which may lead to a dangerous condition and cause superficial to medium injury, or physical Λ CAUTION damage only, if not carried out properly.

Depending on circumstances, procedures indicated by ACAUTION may also be linked to serious results.

In any case, it is important to follow the directions for usage Store this manual in a safe place so that you can take it out and read it whenever necessary. Always forward it to the end user.

IDESIGN PRECAUTIONS1

DANGER

· Configure an interlock circuit in a sequence program so that the system operates on the safety side using the communication status information in the event the data link falls into a communication problem. Otherwise, erroneous output and malfunction may result in accidents.

Bemote input and output can not be switched ON or OFF when a problem occurs in the remote I/O modules. Therefore build an external monitoring circuit that will monitor any input signals that could cause a serious accident.

ACAUTION

• Do not have control cables and connection cables bundled with or placed near by the main circuit and/or power cables. Wire those cables at least 100mm(3.94 inch) away from the main circuit and/or power cables. It may cause malfunction due to noise interference. Use the module and the connection cable without applying any force on

them

Otherwise, such cables may be broken or fail.

[INSTALLATION PRECAUTIONS]

≜CAUTION

 Use the module in an environment that meets the general specifications. contained in this manual. Using this module in an environment outside the range of the general specifications could result in electric shock, fire, erroneous operation, and damage to or deterioration of the product.

- Do not directly touch the module's conductive parts.Doing so could cause malfunction or trouble in the module.
- Tighten the module securely using DIN rail or installation screws within the specified torque range.
- If the screws are too lose, the module may drop from its installation position, short circuit, or malfunction. If the screws are too tight, the screws may be damaged, which may cause the module to drop from its installation position or short circuit.
- Install the module on a flat surface.
- If the mounting surface has concave and/or convex, an excessive force may be applied on the module, and nonconformity may be caused.

WIRING PRECAUTIONS

Perform installation and wiring after disconnecting the power supply at all phases externally. If the power is not disconnected at all phases an electric shock or product damage may result.

∧ CAUTION

Perform correct wiring for the module according to the product's rated voltage and terminal arrangement. Connecting to a power supply different from rating or miss-wiring may cause fire, product failure or malfunction Make sure foreign objects do not get inside the module, such as dirt and wire chips. It may cause fire, product failure or malfunction

Attach a warning label (hazard symbol 417-IEC-5036) concerning the electric shock to the location

ISTARTING AND MAINTENANCE PRECAUTIONS

♦ DANGER

Do not touch the terminals when the power is ON. It may cause an electric shock or malfunction

Perform cleaning the module or retightening of terminal screws after turning OFF the all external power supply for sure. Failure to do so may cause failure or malfunction of the modules

ACAUTION

Do not disassemble or modify the module. Doing so may cause failure. malfunction, injury, or fire,

The module case is made of resin: do not drop it or subject it to strong shock. A module damage may result. Make sure to switch all phases of the external power supply OFF before

installing or removing the module to/from the panel. Failure to do so may cause failure or malfunction of the modules

DISPOSAL PRECAUTIONS

When disposing of this product, treat it as industrial waste.

TRANSPORTATION AND MAINTENANCE PRECAUTIONS

∧ CAUTION

During transportation avoid the impact which exceeds a regulated value as the module is a precision instrument. Doing so could cause trouble in the module

DANGER

It is necessary to check the operation of module after transportation, in case of any impact damage. Otherwise causes the damage of the machine and the accident

Note Concerning the CE Marking

This note does not guarantee that an entire mechanical module produced in accordance with the contents of the notification comply with the following standards. Compliance to EMC standards of the entire mechanical module should be checked by the user / manufacturer.

Standards with which this product complies

Type : Programmable Controller (Open Type Equipment) Remote I/O module Models . Products manufactured:

from February 1st, 2004 to April 30th, 2006 are compliant with EN61000-6-4 and EN61131-2:1994+411:1996+412:2000 after May 1st. 2006 are compliant with EN61131-2:2003 -

(EMC)	Remark
EN61000-6-4:2001 Electromagnetic compatibility -Generic standards - Emission standard for Industrial environment	Compliance with all relevant aspects of the standard. (Radiated Emissions and Mains Terminal Voltage Emissions)
EN61131-2:1994/A11:1996/A12:2000 Programmable controllers -Equipment requirements and tests	Compliance with all relevant aspects of the standard. (RF Immunity, Fast transients, ESD and Damped oscillatory wave)
EN61131-2: 2003 Programmable controllers -Equipment requirements and tests	Compliance with all relevant aspects of the standard. (Radiated Emissions, Mains Terminal Voltage Emissions, RF immunity, Fast Transients, ESD, Surge, Voltage drops and interruptions, Conducted and Power magnetic fields)

For more details please contact the local Mitsubishi Electric sales site. - Notes For compliance to EMC regulation.

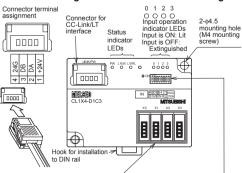

It is necessary to install the CL1 series module in a shielded metal control panel.

1. Outline of Product

This product is an open sensor connector type input module connected to CC-Link/LT This product has four input points (24V DC)

2. Name and Setting of Each Part and Terminal Arrangement

Connector for I/O interface

Terminal arran	gement (F	in number and Signal name)
	Pin I	Indine

Set up using a slotted screwdriver with a tip width of 0.9 mm or less

3. Installation

The CL1X4-D1C3 can be installed to DIN rail or directly installed using mounting screws.

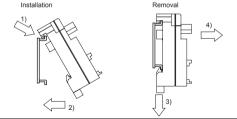

Each installation procedure is described below

3.1 Installation to DIN rail

When installing the module, align the upper DIN rail installation groove on the module with the DIN rail 1) and press the module on to the DIN rail 2) When removing the module, pull the hook downward for installation to DIN rail 3), then remove the module 4).

DIN rail mounting screw pitch

When installing the module to the DIN rail, tighten the mounting screws at the pitch of 200mm(7.87") or less.

TH35-7.5Fe and TH35-7.5AI Applicable DIN rail Width:35mm

3.2 Direct installation

Screw-tighten the module by attaching M4 screws to the upper and lower mounting holes (two holes in all) provided in the module. Install the module so that the clearance of 1 to 2mm (0.04" to 0.08") is assured for each module

Applicable screw	$M4 \times 0.7mm(0.03") \times 16mm(0.63")$ or more (Tightening torque range: 78 to 108 N·cm)	
------------------	--	--

4. Wiring

4.1 Connecting and wiring of connector for I/O interface

Wire the connector for I/O interface (e-CON) according to the following procedure

- 1) Verify that the plug cover is installed in the plug unit.
- Caution: Do not push the plug cover into the plug unit before the cable is inserted.
- Once a plug is pressure-displaced, it can no longer be reused. 2) Insert the cable until it makes contact with the plug unit.
- When inserting the cable, confirm that it has been inserted completely. If the cable is not inserted completely, it may cause contact failures.
- If the cross section of the cable is not round, the cable cannot be inserted smoothly. Cut the cable tip using pliers, etc., and make is as round as possible, then insert it.
- When inserting the cable, the cable may stick out from the front of the cover. In such a case, pull the cable backward so that the tip of the cable stays within the plug cover.

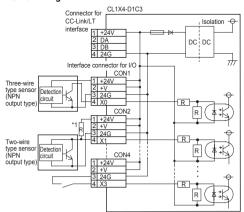

- 3) Using a pliers or special tool, push the plug cover into the plug unit, and pressure-displace it After performing pressure displacement verify that the plug cover is securely attached to the plug unit, as shown in the figure at right.
- While performing pressure displacement, the plug cover may rise because it is not latched against the plug unit correctly. This condition indicates that pressure displacement is incomplete. Push the plug cover until it is securely installed in the plug unit

4.2 External wiring

Do the action of the input terminal of CL1X4-D1C3 by using the power supply supplied from the CC-Link/LT interface The sensor connected with the input terminal must use the one of the NPN

External wiring

opening collector transistor type.

All 24G pin are connected within the module (common).

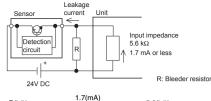

The module power and external power supply for the input are supplied by the power adapter or the dedicated power supply. Notes:

*1 Bleeder resistor

When connecting a two-wire type sensor or input equipment containing a parallel resistor, select a sensor or equipment whose leakage current is 1 7mA or less

If the leakage current is more than 1.7mA, connect a bleeder resistor obtained in the following calculation formula.

Circuit image

Leakage current(mA) - 1.7(mA)

 $W = \frac{(Input voltage)^2}{(Input voltage)^2}$ R

· Please set the response speed (DIP switch) according to the ON or OFF time of the input signal When setting 1.5 ms: Set both the ON and OFF time of the input signal to 1.5 ms or more. When setting 0.5 ms: Set both the ON and OFF time of the input signal to 0.5 ms or more.

5. Specifications

5.1 General sp										
Item		S								
Ambient working temperature	0 to 55°C (3	2 to 131°F)

Installation place	Inside control panel (*2)									
Over-voltage category	II or less (*3)								
Degree of contamination	2 or less (*4))								

Notes

*1 The module cannot be used in an environment pressurized above the atmospheric pressure which can be generated around the altitude of 0 m. If the module is used in such an environment, it may fail.

*2 The module can be used in any environment even outside the control panel as far as the requirements of the ambient operating temperature, the ambient operating humidity, etc. are satisfied.

*3 This indicates the section of the power supply to which the equipment is assumed to be connected between the public electrical power distribution network and the machinery within premises. Category II applies to equipment for which electrical power is supplied from fixed facilities.

The surge voltage withstand level for up to the rated voltage of 300V is 2500V. *4 This index indicates the degree of conductive generating substances in the environment in which the module is used. The degree of contamination 2 indicates that contamination is caused by generation of only non-conductive

substances In this degree, however, temporary conduction may be caused by accidental condensation

6. Outside Dimensions

This manual confers no industrial property rights or any rights of any other kind, nor does it confer any patent licenses. Mitsubishi Electric Corporation cannot be held responsible for any problems involving industrial property rights which may occur as a result of using the contents noted in this manual.

Warranty

Mitsubishi will not be held liable for damage caused by factors found not to be the cause of Mitsubishi: machine damage or lost profits caused by faults in the Mitsubishi products: damage, secondary damage, accident compensation caused by special factors unpredictable by Mitsubishi: damages to products other than Mitsubishi products: and to other duties.

A For safe use

- This product has been manufactured as a general-purpose part for general industries, and has not been designed or manufactured to be incorporated in a device or system used in nurnoses related to human life
- Before using the product for special purposes such as nuclear power, electric power aerospace, medicine or passenger movement vehicles, consult with Mitsubishi, This product has been manufactured under strict guality control. However when
- installing the product where major accidents or losses could occur if the product fails, install appropriate backup or failsafe functions in the system.

•SAFETY PRECAUTIONS•

(Read these precautions before using) Please read this manual carefully and pay special attention to safely in order to handle this product properly. Also pay careful attention to safely and handle the module properly. These precautions apply only to Mitsubishi equipment. Refer to the user's manual of the CPU module to use for a description of the PLC system safety precautions.

precautions. These SAFETY PRECAUTIONS classify the safety precautions into two schedules: "TANGER" and "CAUTION".

categorios. Brande	
DANGER	Procedures which may lead to a dangerous condition and cause death or serious injury if not carried out properly.

Procedures which may lead to a dangerous condition and cause superficial to medium injury, or physical damage only, if not carried out properly.

Depending on circumstances, procedures indicated by ACAUTION may also be linked to serious results. In any case, it is important to follow the directions for usage. Store this manual in a safe place so that you can take it out and read it whenever necessary. Always forward it to the end user.

[DESIGN PRECAUTIONS]

DANGER Configure an interlock circuit in a sequence program so that the system operates on the safety side using the communication status information in the event the data link falls into a communication problem. Otherwise, erroneous output and malfunction may result in accidents. Remote input and output can not be switched ON or OFF when a problem occurs in the remote I/O modules. Therefore build an external monitoring circuit that will monitor any input signals that could cause a serious accident.

Do not have control cables and connection cables bundled with or placed near by the main circuit and/or power cables. Wire those cables at least 100mm(3.94 inch) away from the main circuit and/or power cables. It may cause malfunction due to noise interference. Use the module and the connection cable without applying any force on them

Otherwise, such cables may be broken or fail.

[INSTALLATION PRECAUTIONS]

Use the module in an environment that meets the general specifications contained in this manual. Using this module in an environment outside the range of the general specifications could result in electric shock, fire erroneous operation, and damage to or deterioration of the product. Do not directly touch the module's conductive parts.Doing so could cause malfunction or trouble in the module.

- Tighten the module securely using DIN rail or installation screws within I ginten the module securely using DIN rail or installation screws within the specified torque range. If the screws are too lose, the module may drop from its installation position, short circuit, or malfunction. If the screws are too tight, the screws may be damaged, which may cause the module to drop from its installation position or short circuit. Lettell the module on a flot our face.
- Install the module on a flat surface.
- If the mounting surface has concave and/or convex, an excessive force may be applied on the module, and nonconformity may be caused.

Perform installation and wiring after disconnecting the power supply at all phases externally. If the power is not disconnected at all phases an electric shock or product damage may result.

WIRING PRECAUTIONS

Perform correct wiring for the module according to the product's rated voltage and terminal arrangement. Connecting to a power supply different from rating or miss-wiring may cause fire, product failure or malfunction. Make sure foreign objects do not get inside the module, such as dirt and wire chips. It may cause fire, product failure or malfunction. Attach a warning label (hazard symbol 417-IEC-5036) concerning the electric shock to the location.

[STARTING AND MAINTENANCE PRECAUTIONS] **DANGER**

Do not touch the terminals when the power is ON. It may cause an electric shock or malfunction. Perform cleaning the module or retightening of terminal screws after turning OFF the all external power supply for sure. Failure to do so may cause failure or malfunction of the modules

Do not disassemble or modify the module. Doing so may cause failure, malfunction, injury, or fire. The module case is made of resin; do not drop it or subject it to strong shock

A module damage may result. A module damage may result. Make sure to switch all phases of the external power supply OFF before installing or removing the module to/from the panel. Failure to do so may cause failure or malfunction of the modules.

[DISPOSAL PRECAUTIONS]

DANGER · When disposing of this product, treat it as industrial waste [TRANSPORTATION AND MAINTENANCE PRECAUTIONS]

During transportation avoid the impact which exceeds a regulated value as the module is a precision instrument. Doing so could cause trouble in the module.

It is necessary to check the operation of module after transportation, in case of any impact damage. Otherwise, causes the damage of the machine and the accident.

●Note Concerning the CE Marking● This note does not guarantee that an entire mechanical module produced in accordance with the contents of the notification comply with the following standards. Compliance to EMC standards of the entire mechanical module should be checked by the user / manufacturer.

Description Set the 10's digit of the station No. using "STATION NO. 10", "STATION NO. 20" and "STATION NO. 40". Set the 1's digit of the station No. using "STATION NO. 1", "STATION NO. 2", "STATION NO. 4" and "STATION NO. 8". Factory default = All bits are OFF. Make sure to set the station No. in the range from 1 to 64. If any station No. outside the range from 1 to 64 is set. It is, If any station No. outside the range from 1 to 64 is set, it is regarded as an error and the L ERR. LED lights. Station 10's digit No. 40 20 10 8 4 2 1 32 OFF ON OFF ON OFF ON OFF DIP switch Sets the response speed. 0.5ms 1.5ms ON: 0.5 ms (fast response type) OFF: 1.5 ms (standard type)

driver with a tip width of 0.9 mm or le * Set up using a slot

3. Installation

Nar

The CL1X4-D1C3 can be installed to DIN rail or directly installed using mounting screws

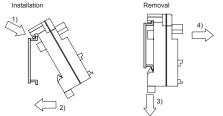

3.1 Installation to DIN rail

Each installation procedure is described below

When installing the module, align the upper DIN rail installation groove on the module with the DIN rail 1), and press the module on to the DIN rail 2). When removing the module, pull the hook downward for installation to DIN rail 3), then remove the module 4).

DIN rail mounting screw pitch

When installing the module to the DIN rail, tighten the mounting screws at the pitch of 200mm(7.87") or less.

Applicable DIN rail TH35-7.5Fe and TH35-7.5Al

3.2 Direct installation

Screw-tighten the module by attaching M4 screws to the upper and lower mounting holes (two holes in all) provided in the module. Install the module so that the clearance of 1 to 2mm (0.04" to 0.08") is assured for each module

M4 × 0.7mm(0.03") × 16mm(0.63") or more Applicable screw (Tightening torque range: 78 to 108 N·cm)

4. Wiring

4.1 Connecting and wiring of connector for I/O interface Wire the connector for I/O interface (e-CON) according to the following procedure:

1) Verify that the plug cover is installed in the plug unit. Caution: Do not push the plug cover into the plug unit before the cable is

inserted Once a plug is pressure-displaced, it can no longer be reused.

- Insert the cable until it makes contact with the plug unit.
 When inserting the cable, confirm that it has been inserted completely.
 - If the cable is not inserted completely, it may cause contact failures. If the cross section of the cable is not round, the cable cannot be inserted smoothly. Cut the cable tip using pliers, etc., and make is as round as possible, then insert it.
- When inserting the cable, the cable may stick out from the front of the cover. In such a case, pull the cable backward so that the tip of the cable stays within the plug cover.

3) Using a pliers or special tool, push the plug cover into the plug unit, and pressure-displace it. After performing pressure displacement, verify that the plug cover is securely attached to the plug unit, as shown in the figure at right.

While performing pressure displacement, the plug cover may rise because it is not latched against the plug unit correctly. This condition indicates that pressure displacement is incomplete. Push the plug cover until it is securely installed in the plug unit.

4.2 External wiring

Do the action of the input terminal of CL1X4-D1C3 by using the power supply supplied from the CC-Link/LT interface

The sensor connected with the input terminal must use the one of the NPN opening collector transistor type.

External wiring Connector for CL1X4-D1C3 CC-Link/LT Isolation -O DC DC Interface connector for I/O CON1 1 +24V R (4:5 CON2 1 +24V R CON4 R (桃 Ç R `\$(**\$**;\$

5.2 Input specifications

Item		Specification		
Input method		DC input (Power supply supplied from CC-Link/LT interface)		
Number of inpu	uts	4 points		
Isolation metho	bd	Isolation with photocoupler		
Rated input voltage		24V DC		
Rated input current		Approx. 4 mA		
Operating voltage range		20.4 to 28.8V DC (24V DC -15% to +20%) Ripple ratio: Within 5%		
Max. simultaneous ON input points		100% (at 24V DC)		
ON voltage/ON current		19 V or more/3 mA or more		
OFF voltage/OFF current		11 V or less/1.7 mA or less		
Input resistance		5.6 kΩ		
Response	OFF→ON	0.5ms/1.5 ms or less (at 24V DC) Selected by DIP switch (default value = OFF/1.5ms).		
time	ON→OFF	0.5ms/1.5 ms or less (at 24V DC) Selected by DIP switch (default value = OFF/1.5ms).		
Common wiring method		4 points/1 common (sensor connector 3-wire type)		

5.3 Performance specifications

Item		Specification		
	Voltage	20.4 to 28.8V DC (24V DC -15% to +20%) Ripple ratio: Within 5%		
Module power	Current consumption	35mA (when all points are ON)		
supply	Initial current	70mA		
	Max. allowable momentary power failure period	PS1:1ms		
Number of stations occupied		4-, 8- or 16-point mode: 1 station		
Noise durability		500Vp-p Noise width: 1µs Cycle: 25 to 60 Hz (by noise simulator)		
Withstand voltage		500V AC for 1 min between primary area (externa DC terminal) and secondary area (internal circuit		
Isolation resistance		10 MΩ or more between primary area (external DC terminal) and secondary area (internal circuit by 500V DC megger		
Protection	on class	IP2X		
I/O part connection method		Connection with terminal block		
Module installation method		DIN rail installation, mounted by screws of type $M4 \times 0.7mm(0.03") \times 16mm(0.63")$ or larger Can be installed in six directions		
Mass (weight)		0.04 kg (0.09 lbs)		

6. Outside Dimensions

s manual confers no industrial property rights or any rights of any other kind, n is it confer any patent licenses. Mitsubishi Electric Corporation cannot be he consible for any problems involving industrial property rights which may occur a suit of using the constants random the manual. esult of using the contents noted in this manual

Warranty Mitsubishi will not be held liable for damage caused by factors found not to be the cause of Mitsubishi; machine damage or lost profits caused by faults in the Mitsubishi products; damage, secondary damage, accident compensation caused by special factors unpredictable by Mitsubishi; damages to products other than Mitsubishi products; and to other duties.

All 24G pin are connected within the module (common). The module power and external power supply for the input are supplied by the power adapter or the dedicated power supply

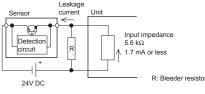

Notes:

*1 Ble eder resisto

When connecting a two-wire type sensor or input equipment containing a parallel resistor, select a sensor or equipment whose leakage current is 7mA or less

If the leakage current is more than 1.7mA, connect a bleeder resistor obtained in the following calculation formula.

Circuit image

1.7(mA) $R(k\Omega) < \frac{1.7(mA)}{Leakage current(mA) - 1.7(mA)} \times 5.6(k\Omega)$

The power capacity W of the bleeder resistor R is as follows

 $W = \frac{(Input voltage)^2}{(Input voltage)^2}$

· Please set the response speed (DIP switch) according to the ON or OFF time of the input signal. When setting 1.5 ms: Set both the ON and OFF time of the input signal to 1.5 ms or more. When setting 0.5 ms Set both the ON and OFF time of the input signal to 0.5 ms or more.

module is used in such an environment, it may fail.

- *2 The module can be used in any environment even outside the control panel as far as the requirements of the ambient operating temperature, the ambient operating humidity, etc. are satisfied.
- *3 This indicates the section of the power supply to which the equipment is assumed to be connected between the public electrical power distribution network and the machinery within premises. Category II applies to equipment for which electrical power is supplied from fixed facilities.

The surge voltage withstand level for up to the rated voltage of 300V is 2500V.

*4 This index indicates the degree of conductive generating substances in the environment in which the module is used. The degree of contamination 2 indicates that contamination is caused by generation of only non-conductive

In this degree, however, temporary conduction may be caused by accidental condensation

- This product has been manufactured as a general-purpose part for general industries, and has not been designed or manufactured to be incorp device or system used in purposes related to human life. ated in a
- Before using the product for special purposes such as nuclear power, electric power
- aerospace, medicine or passenger movement vehicles, consult with Mitsubishi. This product has been manufactured under strict quality control. However when installing the product where major accidents or losses could occur if the product fails, install appropriate backup or failsafe functions in the system.
